

Before you record: open two tabs — the dashboard on `#problem`, and the GitHub repo. Browser at 100% zoom. Notifications off. Do it in one take. **Bold text = say this.** Grey boxes = do this on screen. Don't read it word for word. Read it twice, then just talk.

0:00 – 0:20

FACE

“Hi, I’m Suyash. This is Muhurat.

When a payment fails, almost every system does the same thing. Retry it.
Right away. Three times.

That is usually wrong. Let me show you why.”

0:20 – 0:55

SCREEN · THE PROBLEM

“Three real Razorpay errors.

Account is empty. Money comes on salary day. That is days away.

Bank is down. It comes back in a few hours, on its own.

Card expired. It will never work again.

Three problems. Three different answers. But most systems treat them the same.

On our test data, that gets back only twelve percent of the money.”

► Scroll to the bar chart.

0:55 – 1:45

SCREEN • THE WINDOW

★ first hook

“So it is not about how many times you retry. It is about when.
Here is a case where everyone gets it wrong.”

▶ Click `otp_attempts_exceeded` .

“The customer typed the OTP wrong too many times. What would you do?
Send them a new link, right? Watch.”

▶ Drag the slider to about 4 hours.

“Two percent. It does not work.

The bank has locked the card. It is not the customer’s fault any more.
Messaging them just annoys them.”

▶ Drag past 14 hours.

“Ninety percent. The lock expired. Same card. Same customer. We just waited.
And our system cannot see when that lock expires. It has to work it out.”

1:45 – 2:35

SCREEN • ADVISOR

“That is what this does.”

▶ Dropdown → `insufficient_funds` .

“Wait for salary. Retry in three days. Do not message the customer.
It tells you what to do, and what not to do.”

▶ Dropdown → `order_already_paid` .

“This one says stop. Do not retry — you would charge them twice. And do not
message them either.”

▶ Dropdown → second group → `transaction_daily_limit_exceeded` .

“This code is not in our rules at all. The AI handled it. Wait eighteen hours,
because daily limits reset overnight.”

2:35 – 3:15

SCREEN • THE REPLAY

► Hit play.

“Fourteen days in twenty seconds.

Every light is one failed payment. It turns on when we get the money back.

Watch the simple one. It uses everything in six minutes. Then nothing, for two weeks.

And this orange one? We built it to cheat. It waits until day fourteen. It still loses.”

Let it run. Stop talking for a few seconds.

3:15 – 4:20

SCREEN • INTEGRITY

★ your best minute — go slow

“This is the part I care about most.

Three times, we thought our AI was winning. Three times, it was our own bug.

A bug in our simulation. Forty-seven thousand rupees.

A wrong rule in our own table. Twenty-six thousand.

A weak fallback. Seventy-nine thousand.

One and a half lakh rupees our AI would have got for free.

We found all three. We fixed them before we measured the AI.

That made our AI look worse. We did it anyway.

And when we changed all our assumptions by forty percent, the AI only won seventeen times out of twenty-one. We put that on the website, right next to the good number.”

4:20 – 5:00

FACE

“So. Simple retry gets twelve percent. Our best gets fifty-eight. Perfect knowledge would get seventy-one.

It is a simulation, and we say that clearly.

Thirteen tests make sure no policy can cheat.

The real work here is not the AI. It is building something that tells you the truth, even when the truth is bad for us.

Thank you.”

THREE THINGS THAT MATTER

1. **Go slow from 3:15 to 4:20.** Everyone else will say “our AI is better.” You are saying “our own test caught us cheating three times.” That is what makes you different.
2. **Actually drag the slider. Actually press play.** Live clicking looks real. Screenshots look like a slide deck.
3. **Say the ₹1.5 lakh line out loud once before recording.** It should sound like you know it, not like you are reading it.

IF YOU RUN LONG

Cut `order_already_paid` at 2:15. Everything else you need.

ON CAMERA

Face for the first 20 seconds and the last 40. Screen for the middle. Good sound matters more than good video — use earphones with a mic.

IF A JUDGE ASKS ABOUT THE AI

Say it first, before they ask:

“We had no API key, so the AI answers came from the same model in a chat session. Every saved answer says so, and it is written in our README.”

Saying it yourself is much stronger than getting caught.

NUMBERS — DO NOT GET THESE WRONG

- ₹5,09,681 at risk · 300 failed payments
- 110 real Razorpay error codes
- Simple retry 12% → our best 58%
- Perfect knowledge 71%
- Our own bugs we found: ₹1,53,137
- AI won 17 of 21 tests · cheat policy won 0 of 21
- 88 tests pass · 13 anti-cheat tests
- Codes our rules miss: 51, worth ₹1,87,814
